АРІ тесты пишутся просто

Примеры git: http://git.moscow.alfaintra.net/projects/AZON_CORE/repos/ufr-azon-core-cucumber/browse/features/1-Rest? at=master

 $http://git.moscow.alfaintra.net/projects/AZON_EMPLOYEES/repos/ufr-azon-employees-cucumber/browse/features/1\%20-Rest/employees-api-negative.feature?at=master$

 $http://git.moscow.alfaintra.net/projects/AZON_USERS/repos/ufr-azon-users-cucumber/browse/features/01\%20-\%20REST/user-api-negative.feature?at=master$

Чтобы написать самый простой тест. достаточно знать endpoint, статус ответа, и отдаваемые данные.. далее возможны любые комбинации

На мидле запрос выглядит так

/ufr-azon-employees-api/organizations/<ORID>/employees/

На фронте (требуется предварительная авторизация

/ufr-azon-employees-front/api/employees/<ORID>?usid=<USID>&employee-type=<TYPE>&page-number=<PAGE>

Проверяем middle-api (positive)

- успешные ответы
- наличия ключей
- различные комбинации отправляемых параметров (employee-type = E/F/D/N, page-number= 1 10 100 1000)

```
: employees-api
         - 200
                       currentPage totalPages totalEmployees employees
